## SHOP BUILT TANKS

Depending on the dimensions, tanks up to 60,000 gallons can be built in our shop. Various heating and cooling surfaces are available, either single wall or insulated with outer jacket. Material finishes include 2B/mill, high polish (#4), and in-house electropolish to 10Ra (some size restrictions apply).

## FIELD BUILT TANKS

Using our own highly skilled personnel, SFI field crews erect tanks on-site up to 600,000 gallons (approx. 60' dia.). Our unique fabrication method allows the crew to work in confined areas such as under a roof or in tight surroundings with limited access. The assembly process takes place at ground level, which typically eliminates the need for scaffolding and cranes, resulting in a safe and efficient jobsite and high quality workmanship.

SFI also performs on-site modifications and repairs to existing vessels such as silo top replacement, adding sidewall to increase capacity, installing heat transfer surface, adding ladders or other accessories, etc.
